

# Download Breast Cancer Prevention Plan

Breast cancer is a disease in which malignant (cancer) cells form in the tissues of the breast. The breast is made up of lobes and ducts. Each breast has 15 to 20 sections called lobes, which have many smaller sections called lobules. Besides female sex, advancing age is the biggest risk factor for breast cancer. Reproductive factors that increase exposure to endogenous estrogen, such as early menarche and late menopause, increase risk, as does the use of combination estrogen-progesterone hormones after menopause. Breast cancer is the second most common cancer among women in the United States. The Data Visualizations Tool provides detailed statistics. Low-Cost Screening CDC's National Breast and Cervical Cancer Early Detection Program provides low-cost breast and cervical cancer screenings. Find out if you This topic contains 621 study abstracts on Breast Cancer indicating that the following substances may be helpful: Soy, Curcumin, and Isoflavones
