

Download Rv Converter Ac Panel Schematic

Repairing the Magnatek Power Converter. Note: This unit was in my Sierra 30 foot trailer. When spring came and I prepared to get my RV all un-winterized and ready to take out, I discovered that my trailer battery was nearly dead. Hopefully you've read my previous post "How to choose the Best RV Inverter" which means you did your research, estimated your power requirements, and finally came to a decision. Hi Steve-That is indeed a problem. At the factory level, the converter probably cost around \$20-30. By the time shipping and markup through the distribution channels is added in, the circuit board was still only around \$130- though it isn't available any more. Don't just rush out and buy lots of solar panels for your RV. Figure out if you actually need them first! I'll show you how in this post.
